

ENTERPRISE RISK MANAGEMENT

Advancing the Corporate Environmental Risk Protocol

Enterprise Risk Management

The BP oil spill, SEC mandates for carbon disclosure, shifting EPA regulations ... 2010 was marked by many events that proved corporate risks related to environment and sustainability are very tangible, very costly, and often difficult to predict. We were reminded that there are current and future uncertainties in the areas of quantifying and mitigating environmental risks.

The AHC Group specializes in this space. Using a four-phase approach , we will work with your company to assess, define, develop, and implement a strategic enterprise risk plan that works with the culture of your company.

Our Senior Associates can help your firm to anticipate and mitigate the risks that reshape corporations today.

Enterprise risks for Business are growing in a flat, crowded and tense world, primarily induced by human actions in this new century. Human and industrial impacts on the natural world heighten the severity of natural disasters, which causes changes from population stress and natural resource needs for food, energy and shelter.

As a result of points above, corporate Environmental, Safety, Security, and Sustainability programs are becoming rapidly and intrinsically linked. Companies that compete for sustainability are building enterprise risk programs to account for what is in their span of control and as a means for growth in a turbulent global world.

ENTERPRISE RISK MANAGEMENT

Advancing the Corporate Environmental Risk Protocol

Enterprise Risk Management

ASSESS

Understand where the business currently stands on environmental enterprise risks, and in relation to the measures, controls, and protocols of other leading companies.

DEFINE

Conduct enterprise risk mapping internally so that enterprise risks can be identified, assessed, prioritized and included in planning efforts for risk mitigation.

DEVELOP

Work with Senior Leadership Team, P&L Leaders and Sustainability Leadership to set goals that go beyond compliance to reduce footprint, exposure and enterprise environmental risks. Develop a Strategic Enterprise Risk Assessment and Plan.

IMPLEMENT, REFINE, REPLICATE

Support the implementation and refinement of the protocol through active facilitation, support services, metrics & reporting.

Environmental Risk Protocol and Strategic Enterprise Risk Planning
